

SALAH MOHAMED

Backend Software Engineer | Laravel & PHP

Alexandria, Egypt • +20 127 354 2801 • salah.eldeen.mail@gmail.com

github.com/salaheldeen911 • linkedin.com/in/salah-eldeen-mohamed

PROFESSIONAL SUMMARY

Backend engineer with 3+ years building Laravel-based SaaS platforms, including a multi-tenant logistics system serving European clients. Strong in MySQL optimization, Stripe integrations, and real-time features using Laravel Reverb and Redis. Comfortable owning backend modules end-to-end, from schema design to deployment.

WORK EXPERIENCE

Freelance Backend Developer — Self-employed

01/2025 – Present

Alexandria, Egypt • Remote

- **Real estate platform (Syrian market):** Designed the core schema and built property search APIs with filtering across 30+ attributes (location, price, type, amenities). Integrated WebSocket-based chat with Laravel Echo, including typing indicators and presence channels.
- **Wallet & credits system:** Built a points-based wallet allowing users to recharge balance and spend credits on listing properties and premium features; handled transaction integrity, balance validation, and audit logging.
- **Currency exchange & cashier system:** Built a multi-currency, multi-branch cashier platform handling 1000+ daily transactions across 5 branches; used database transactions and row-level locking to prevent race conditions during concurrent cashier sessions.

Backend Developer — RayaGate IT Company

08/2022 – 12/2024

Alexandria, Egypt

- **Multi-tenant logistics SaaS (Germany):** Built database-per-tenant architecture serving 10 tenant companies. Implemented Stripe subscription flows with tenant-aware webhook handling, isolating billing cycles per tenant.
- **Tenant provisioning:** Moved the 5-second tenant onboarding flow (database creation, schema migration, seeded data, owner setup) onto a Redis-backed queue, so signup requests return instantly while provisioning runs in the background.
- **API performance:** Improved response times on high-traffic endpoints through Redis caching, eager loading, targeted indexes, and N+1 query elimination.
- **CMS for German university:** Built a content management backend with role-based access control, multilingual support (German and English), and content approval workflows for 100 active editors.
- **Code quality:** Refactored fat controllers into a service-layer structure across legacy modules, isolating business logic from HTTP handling and making the codebase easier to maintain and extend.
- **Mentorship & code review:** Code-reviewed work from 3 junior developers; ran internal sessions on Laravel best practices, OOP, and common security pitfalls (mass assignment, SQL injection via raw queries, broken authentication).

SELECTED PROJECTS

laravel-custom-fields — Open Source Package

- Laravel package using polymorphic relationships to attach dynamic custom fields (text, number, date, email, multi-choice) to any Eloquent model without migrations.
- Repo: github.com/salaheldeen911/laravel-custom-fields • Packagist: packagist.org/packages/salah/laravel-custom-fields

Real Estate Platform — Syrian Market

- Backend lead on a team of 3; designed the schema, built filtering and search APIs, and integrated the custom-fields engine for dynamic listing attributes.
- Real-time chat with Laravel WebSockets and Echo (typing indicators, presence channels). Image processing and email notifications offloaded to Redis queues.

Currency Exchange & Cashier System

- Multi-currency, multi-branch cashier platform with concurrent session handling and live exchange-rate sync via Laravel Reverb.
- Atomic transactions, row-level locking, and audit logs to handle concurrent cashier operations without inconsistent state.

TECHNICAL SKILLS

Languages & Frameworks: PHP 8.x, Laravel 11, JavaScript, Vue.js, Livewire, Blade

Databases: MySQL — schema design, indexing, query optimization, transactions, concurrency control

Caching & Queues: Redis, Laravel Horizon, Supervisor, background jobs

Real-time: Laravel Reverb, Laravel Echo, WebSockets

Architecture & Design: Multi-tenant (database-per-tenant), RESTful APIs, SOLID, service layer, event-driven flows

Payments: Stripe — subscriptions, one-time payments, webhooks, multi-tenant billing

DevOps & Tools: Git, GitHub Flow, Docker, GitHub Actions, Laravel Forge, Linux

Methodologies: Agile / Scrum, code review, technical mentorship

EDUCATION

Bachelor of Commerce — Alexandria University

LANGUAGES

Arabic (Native) • English (Professional Working Proficiency — reading, writing, speaking)
