PROFESSIONAL SUMMARY

Results-driven Backend Engineer with 3+ years of experience architecting scalable Laravel SaaS platforms, high-throughput APIs, and AI-powered features. Proven track record building multi-tenant production systems (including a logistics platform serving European clients), complex billing engines (Stripe / Wallet credits), and real-time event pipelines using Redis and Laravel Reverb. Expert in MySQL query optimization and Clean Architecture (SOLID), leveraging AI-assisted engineering workflows to accelerate full lifecycle delivery from schema design to cloud deployment.

WORK EXPERIENCE

Freelance Backend Developer — Self-employed

01/2025 – Present

Alexandria, Egypt • Remote

- **Real estate platform (Syrian market):** Designed the core schema and built property search APIs with filtering across 30+ attributes (location, price, type, amenities). Integrated WebSocket-based chat with Laravel Echo, including typing indicators and presence channels.
- **Currency exchange & cashier system:** Built a multi-currency, multi-branch cashier platform handling 1000+ daily transactions across 5 branches; used database transactions and row-level locking to prevent race conditions during concurrent cashier sessions.

Backend Developer — RayaGate IT Company

08/2022 – 12/2024

Alexandria, Egypt

- **Multi-tenant logistics SaaS (Germany):** Built database-per-tenant architecture serving 10 tenant companies. Implemented Stripe subscription flows with tenant-aware webhook handling, isolating billing cycles per tenant.
- **Tenant provisioning:** Moved the 5-second tenant onboarding flow (database creation, schema migration, seeded data, owner setup) onto a Redis-backed queue, so signup requests return instantly while provisioning runs in the background.
- **API performance:** Improved response times on high-traffic endpoints through Redis caching, eager loading, targeted indexes, and N+1 query elimination.
- **CMS for German university:** Built a content management backend with role-based access control, multilingual support (German and English), and content approval workflows for 100 active editors.
- **Code quality:** Refactored fat controllers into a service-layer structure across legacy modules, isolating business logic from HTTP handling and making the codebase easier to maintain and extend.
- **Mentorship & code review:** Code-reviewed work from 3 junior developers; ran internal sessions on Laravel best practices, OOP, and common security pitfalls (mass assignment, SQL injection via raw queries, broken authentication).

SELECTED PROJECTS

Maktaby — Enterprise LegalTech B2B SaaS Platform

- **Architecture:** Engineered a production-grade Multi-Tenant B2B SaaS using Laravel 13, Inertia React, and Clean Architecture.
- **Core Engine:** Built secure firm-isolation pipelines featuring real-time support (Reverb WebSockets), legal search (Meilisearch), and accounting.

- **Domain:** maktaby.online (Cloud Enterprise Platform for Law Firms & Legal Management).

PDFKong — High-Performance API-First Document Processing SaaS

- **Architecture:** Engineered a production-grade API-First SaaS using Laravel Octane, Horizon, and Clean Architecture.
- **Core Engine:** Built async document conversion microservices (HTML/Office to PDF) integrated with a prepaid split-wallet credit metering engine.
- **Domain:** pdfkong.online (Cloud REST API for Document Conversion & Manipulation).

laravel-custom-fields — Open Source Package

- Laravel package using polymorphic relationships to attach dynamic custom fields (text, number, date, email, multi-choice) to any Eloquent model without migrations.
- Repo: github.com/salaheldeen911/laravel-custom-fields • Packagist: packagist.org/packages/salah/laravel-custom-fields.

TECHNICAL SKILLS

- **Languages & Frameworks:** PHP, Laravel, JavaScript, Vue.js, Inertia.js, Livewire, Tailwind CSS, Bootstrap.
- **Databases & Search:** MySQL (schema design, indexing, query optimization, transactions, ACID), Meilisearch, Laravel Scout.
- **Performance & Queues:** Laravel Octane, Redis, Laravel Horizon, Supervisor, Asynchronous Background Jobs.
- **Real-Time & Storage:** Laravel Reverb, WebSockets, Laravel Echo, AWS S3, Google Cloud Storage
- **Architecture & APIs:** Multi-Tenancy (Single & Multi-DB Isolation), Clean Architecture, SOLID, Repository/Service Pattern, RESTful APIs, Form Requests, API Resources.
- **Testing & Quality:** Pest, PHPUnit, TDD, Feature & Unit Testing, PSR-12 Standards.
- **Payments & Billing:** Stripe (subscriptions, one-time checkout, webhooks), Usage Metering & Wallet Credit Engines.
- **DevOps & Tools:** Git, GitHub Flow, Docker, GitHub Actions CI/CD, Laravel Forge, Nginx Proxy Manager, Linux.
- **AI & LLM Tooling:** AI-Assisted Engineering, Agentic Workflows, LLM API Integration, Prompt Assembly, Rapid Prototyping & Refactoring.
- **Methodologies:** Agile / Scrum, Code Reviews, Technical Mentorship, End-to-End Module Ownership.

EDUCATION

Bachelor of Commerce — Alexandria University

LANGUAGES

Arabic (Native) • English (Professional Working Proficiency — reading, writing, speaking)
